GAP SCIENCE

LIVE WEBINAR

RECOGNIZING PASSIVE BLOODSTAINS

THE VALUE OF SUBTLE BLOODSTAINS AND TRANSFER

December 3, 2026 | 1400-1600 EST

COURSE DESCRIPTION

Many CSIs and Investigators enjoy the dramatics of a cast-off pattern and an impact stain, this webinar was created to recognize the importance of bloodstains not influenced by outside forces (other than gravity). Bloodstains can provide valuable insight into what occurred on a scene, and this course will help you recognize patterns while interpreting how they came to be.

This course is ideal for investigators and officers who want a better understanding of a bloodstain analyst's observations, as an introduction for a new CSI or death investigator, or as a refresher for an experienced CSI. Whether you are new to bloodstain analysis or looking for a refresher on your existing knowledge, this webinar will help you better understand and evaluate your bloodstain evidence.

What you will learn:

- Basic bloodstain terminology
- A "Crash Course" In Basic bloodstain physics: how blood moves, what it does in the air as it falls, and what happens once it hits the surface
- How surface texture and angle can change the overall shape of a blood drop
- Categorizing transfer, altered, and passive bloodstains on scenes and determining possible scene reconstruction
- Case Studies and Discussions

WHY CHOOSE US?

Our specialized training and resources bridge the gap between generic leadership courses and traditional forensic technician training, equipping you with the skills and knowledge needed for professional development in your forensic career.
