

LIVE WEBINAR

AFTER DEATH:

Post-Mortem Changes & Estimating the Time Since Death

November 13, 2026 | 1100-1230 EST

COURSE DESCRIPTION

This webinar provides a comprehensive introduction to the physico-chemical changes that occur in the human body following death, and the methods used to estimate the post-mortem interval (PMI) in forensic and medicolegal contexts.

Beginning with core terminology and the sequence of early post-mortem changes, students are guided through mummification, adipocere formation, and skeletonization. This webinar also provides an overview of additional methods including the Henssge Nomogram for body cooling, vitreous humour chemistry, and stomach content analysis.

Students will be able to describe the major post-mortem changes and their forensic significance; apply PMI estimation methods appropriate to given scenarios; critically evaluate the strengths and limitations of entomological, biochemical, and physical evidence in time of death estimation.

WHY CHOOSE US?

Our specialized training and resources bridge the gap between generic leadership courses and traditional forensic technician training, equipping you with the skills and knowledge needed for professional development in your forensic career.
